

ABSTRACT OF THE DISCLOSURE

1 A method for generating and disseminating information includes establishing service
2 centers at geographically separated locations, providing at each service center a control computer,
3 a functionally divisible computer client memory, electronic transmission apparatus, fax receiving
4 and transmission apparatus and a printer for printing data from the memory. A portion of the
5 client memory is assigned to each of a plurality of clients and in each client memory portion is
6 stored data representing parts of documents to be generated. In response to a request received
7 from a client, a document is formed and is transmitted by one or more of the available
8 transmission techniques to one or more designated recipients.
